ASTRA: actions, results and errors

Evidence collected 15 October 2026 | Desktop Chromium | 1440 x 1000 | No new application tests were run to prepare this clearer report.

Application: https://astra.52.206.45.195.sslip.io

Main result: no confirmed ASTRA application bug was established by these checks. This does not mean the entire application is bug-free.

Coverage	Result
Focused functional checks	6 checks passed
Page navigation checks	46 routes captured; limited smoke checks only
Confirmed application defects	0 established
Deletion and performance	Excluded; neither was performed
Full end-to-end testing	Incomplete; valid create/edit persistence and other actions remain untested

Read the status correctly

PASS = the stated action met its expected result. SMOKE CHECK ONLY = the route was opened and captured; its complete behavior was not verified. REVIEW = more investigation is needed. NOT TESTED = no result is available. EXCLUDED = intentionally omitted.

The CSV contains the same action/result register, with one test per row. Screenshots remain in this folder; CSV lists their filenames because CSV cannot embed images.

Actions actually performed

F01 - Sign-in - PASS

Action: 1. Open /login. 2. Enter supplied credentials. 3. Click Sign in.

Expected: Authenticated landing page opens.

Actual: Browser reached /ops and displayed the workspace.

Error: None observed

Screenshot: 01-after-login.png

F02 - Dashboard form - PASS

Action: 1. Open /manage/settings/dashboards. 2. Click New dashboard. 3. Leave Name empty. 4. Inspect Create dashboard.

Expected: Empty name cannot be submitted.

Actual: Create dashboard was disabled. Required field was invalid with message: Please fill out this field.

Error: Expected validation message; not an application error.

Screenshot: dashboard-form.png

F03 - Dashboard form - PASS

Action: 1. Open New dashboard form. 2. Click Cancel.

Expected: Form closes without saving.

Actual: Create dashboard control was no longer present.

Error: None observed

Screenshot: No dedicated screenshot; functional.json records the check.

F04 - Apps search - PASS

Action: 1. Open Apps. 2. Enter zzzz-no-app-qa in Search apps.

Expected: A clear no-results message appears.

Actual: Displayed: No apps match zzzz-no-app-qa.

Error: None observed

Screenshot: apps-no-results.png

F05 - Apps menu - PASS

Action: 1. Keep Apps menu open. 2. Press Escape.

Expected: Apps menu closes.

Actual: Apps search input was no longer visible.

Error: None observed

Screenshot: No dedicated screenshot; functional.json records the check.

F06 - Dashboard display - PASS

Action: 1. Open /dashboards. 2. Allow data to load. 3. Inspect content.

Expected: Dashboard content appears.

Actual: Follow-up after a 15-second wait displayed Cloud account overview and populated widgets.

Error: None observed

Screenshot: dashboard-loaded.png

No valid dashboard was submitted. No existing record was edited or deleted.

Errors and observations

ID / status	What was seen	Meaning / next action
OBS-01 / Resolved on follow-up	Initial dashboard screenshot showed Loading dashboard. Later screenshot showed populated content.	No persistent loading failure reproduced. No performance test or timing threshold was applied.
OBS-02 / Needs confirmation	Early form capture showed no saved dashboards; a later management view showed an existing dashboard.	May be initial data loading. Reproduce after the page settles before reporting a bug. No deletion occurred.
Validation / Expected	Empty Name is invalid and Create dashboard is disabled.	Correct validation behavior, not a bug.
Monitoring data / Not an ASTRA defect finding	Incident failures and error logs were visible in monitored-system data.	Those require their own investigation; displaying an error log does not demonstrate a defect in ASTRA.
Test script / Corrected	An initial automation attempt tried to click a disabled Create dashboard button and timed out.	The test was corrected to inspect disabled state. This is not an application failure.

How to record and close one bug

1. Reproduce one clear problem. 2. Record the URL and exact actions. 3. Write expected and actual results. 4. Attach a screenshot. 5. Assign an owner and severity. 6. After the fix, repeat the same actions. 7. Close only if the expected result is verified; otherwise reopen. Do not delete application records or evidence to close a bug.

Bug template (blank, not a finding): ID | Title | URL | Preconditions | Steps | Expected | Actual | Screenshot | Severity | Owner | Status | Retest result.

Route-by-route action register

For every row below, the action was direct authenticated navigation, a brief wait, and screenshot capture. No captured HTTP error means only that none was observed during that window. It does not prove every control or backend operation works.

ID	Route	Status / error
P01	/home	SMOKE CHECK ONLY; None captured in short observation window
P02	/reports	SMOKE CHECK ONLY; None captured in short observation window
P03	/manage/org/organizations	SMOKE CHECK ONLY; None captured in short observation window
P04	/ops	SMOKE CHECK ONLY; None captured in short observation window
P05	/incidents	SMOKE CHECK ONLY; None captured in short observation window
P06	/investigations	SMOKE CHECK ONLY; None captured in short observation window
P07	/dashboards	SMOKE CHECK ONLY; None captured in short observation window
P08	/manage/settings/dashboards	SMOKE CHECK ONLY; None captured in short observation window
P09	/astra/agents	SMOKE CHECK ONLY; None captured in short observation window
P10	/astra/analyzer	SMOKE CHECK ONLY; None captured in short observation window
P11	/astra/code	SMOKE CHECK ONLY; None captured in short observation window
P12	/observe	SMOKE CHECK ONLY; None captured in short observation window
P13	/observe/workloads	SMOKE CHECK ONLY; None captured in short observation window
P14	/infrastructure/service-health	SMOKE CHECK ONLY; None captured in short observation window
P15	/infrastructure/databases	SMOKE CHECK ONLY; None captured in short observation window
P16	/infrastructure/ai	SMOKE CHECK ONLY; None captured in short observation window
P17	/infrastructure/kubernetes	SMOKE CHECK ONLY; None captured in short observation window
P18	/infrastructure/storage	SMOKE CHECK ONLY; None captured in short observation window
P19	/infrastructure/topology	SMOKE CHECK ONLY; None captured in short observation window

ID	Route	Status / error
P20	/infrastructure/network	SMOKE CHECK ONLY; None captured in short observation window
P21	/infrastructure/changes	SMOKE CHECK ONLY; None captured in short observation window

Actions not performed

Action	Status	Next step
Create/edit persistence	NOT TESTED	Requires a separate controlled test pass.
Delete	EXCLUDED	Keep excluded per user instruction.
Performance	EXCLUDED	Keep excluded per user instruction.
Additional coverage	NOT TESTED	Requires a separate controlled test pass.
